

CORRECTION—Due to faulty proofreading on my part an error appeared in my paper “Lectotypification and status of *Vaccinium margarettae* Ashe (Ericaceae)” (Sida 13:65 – 66. 1988) which confuses the sense of the paper and therefore needs correction. At present, the lead sentence in the first paragraph reads “Ashe (1918) described *Vaccinium margarettae* from Rabun County *South Carolina with* designation of holotype.” Corrected, this sentence should read with the italicized words reading “*Georgia without.*”

The author apologizes for this error and appreciates the editor printing this correction.—*Leonard J. Uttal, Department of Biology, Virginia Polytechnic Institute and State University, Blacksburg, VA 24061, U.S.A.*

ACTA BOTÁNICA MEXICANA

Acta Botánica Mexicana is a publication of the Instituto de Ecología, founded with the aim of reporting the results of scientific research in all fields of botany, with special emphasis in Mexican plants. At least four numbers are issued per year, with no stable periodicity. The journal considers original and unpublished papers chiefly in Spanish, but some proportion of articles in English, French and Portuguese is accepted; each paper includes an abstract in Spanish and English. Annual subscription \$15 U.S. Additional information can be obtained from:
